WEATHER TABLE.

The following Table, constructed upon philosophical considerations of the attraction of the Sun and Moon, in their several positions respecting the earth, and confirmed by experience of many years' actual observations, will in very few instances be found to fail.

THE TWO FOLLOWING OBSERVATIONS ARE FROM THE INGENIOUS DR. KIRWAN.

1. When there has been no particular storm about the time of the Spring equinox (March 21),—if a storm arise from the east on or before that day, or if a storm from any point of the compass arise near a week after the equinox, then, in either of these cases, the succeeding summer is generally DRY, four times in five.
2. But if a storm arise from the S. W. or W. S. W. on or just before the Spring equinox, then the Summer following is generally WET, five times in six.
